

## CSS Selectors -- Element

Type 1: ELEMENT (using CSS to style basic html tags)

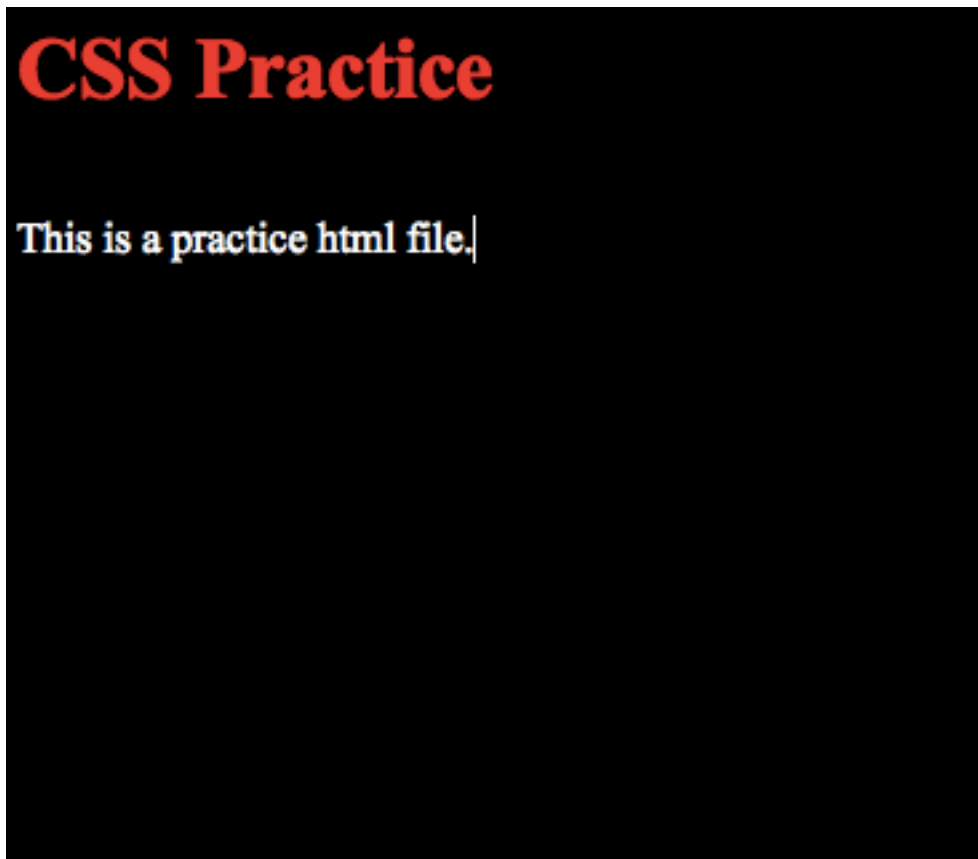

### HTML code

```
1 <!doctype html>
2 <html>
3 <head>
4 <meta charset="UTF-8">
5 <title>CSS practice</title>
6 <link href="css.css" rel="stylesheet" type="text/css">
7 </head>
8
9 <body>
10 <h1> CSS Practice</h1>
11 <br>
12 This is a practice html file.
13
14 </body>
15 </html>
16
17
18
19
20
```

CSS to change h1 color to red , background color to black and text color to white.

```
1 @charset "UTF-8";
2 /* CSS Document */
3
4 body{
5     background-color:black;
6     color:white;
7
8 }
9 h1{
10     color:red;
11 }
12
```

Output:

If you want to apply the same formatting to more than one element you can list them (with commas separating).

For example:

```
ul,ol {  
    color: white;  
}
```
